

REMARKS

The examiner's amendment accompanying the notice of allowability introduced errors into the claims suggested by the informal proposed amendments sent by facsimile on 19 November 2004.

In addition to the obvious typographical errors:

claim 1 was amended to incorporate claim 8, and so is currently amended consistent therewith to recite a narrow band bwr not greater than 200%;

claim 16 is currently amended, as originally presented, to recite broad band bwr not smaller than 150% (the undersigned accidentally introduced the "greater than" error in the amendment filed 13 May 2004, although it was correctly presently thereafter); and

claim 19 was amended to incorporate claim 29, and so is currently amended consistent therewith to recite a broad band bwr not smaller than 150%.

No new matter is added.

Comment on Reasons for Allowance

Consistent with the amendments proposed on 19 November 2004, the examiner's amendments, and those currently made, the narrow and broad band materials found patentable by the examiner are more particularly narrow band materials with a bwr not greater than 200% and broad band materials with a bwr not less than 150%.
